November 2026

WHAT IT IS

Parental controls that children can see and understand

Jesora Guardian lets a parent set age-right rules once and have them followed on every device their children use. It works in the open: the child always sees that Guardian is on, what is limited and why, and can ask for more with one tap.

Safe web

Adult, gambling, violence, self-harm, drugs, hate and more blocked by age. SafeSearch and YouTube Restricted Mode on. Malware and phishing always blocked.

Apps and games

PREMIUM

Block an app, or give a category like games an hour a day. Guardian closes or covers apps that are not allowed.

Screen time PREMIUM

A daily limit for each day of the week, plus bedtime and school-time schedules with the apps that stay allowed.

Ask to unlock

From any blocked app or site, even at bedtime or after the daily limit, the child asks for as long as they need, with a reason. The parent unlocks it for that time, picks another, or says no.

Activity PREMIUM

Screen time for the last 7 days, the most used apps and blocked sites by category, for each child.

Alerts

When protection is turned off, a device stops checking in, or someone tries to change the settings.

Who it is for

- Parents with children from preschool to the late teens: five age bands (3–5, 6–8, 9–12, 13–15, 16–17), each strict, balanced or relaxed.
- Families with a mix of devices: one plan covers up to 5 children and 10 devices.
- Parents who want rules their children can see, not spyware: Guardian never reads messages, keystrokes, photos or passwords.

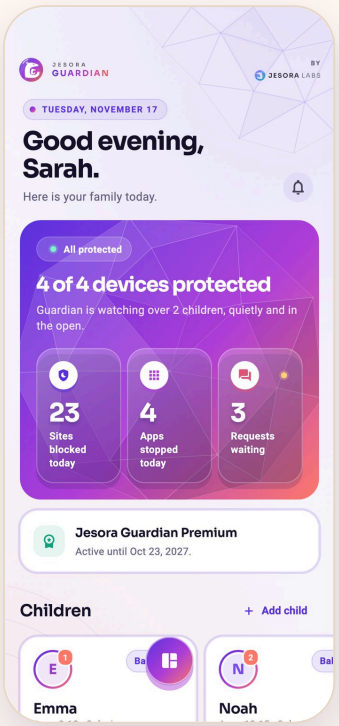

How it fits together

1. The parent creates an account and adds each child with an age band.
2. Guardian is installed on the child's device and paired with a code or QR.
3. Rules arrive signed from guardian.jesoralabs.com and keep working offline.
4. The parent manages everything from the app or a computer.

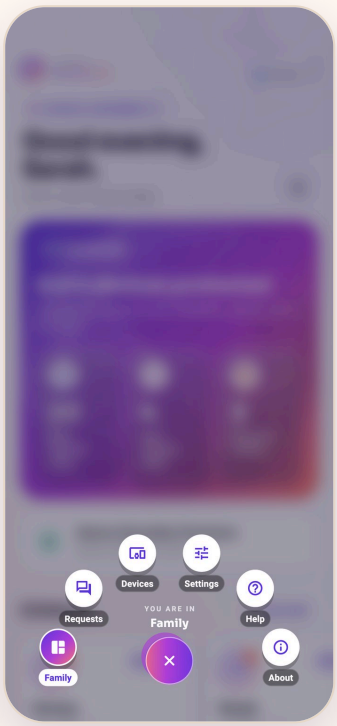

THE PARENT APP

The whole family on one screen

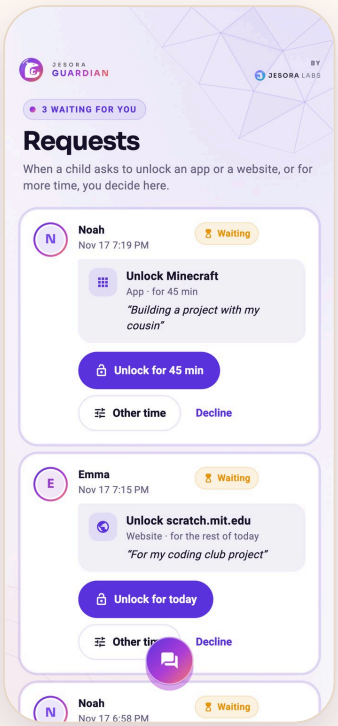

The Family screen shows every child and device at a glance: how many devices are protected, what was blocked today and what is waiting for an answer. On phones a single button opens every section in a fan; on tablets and computers a sidebar does.

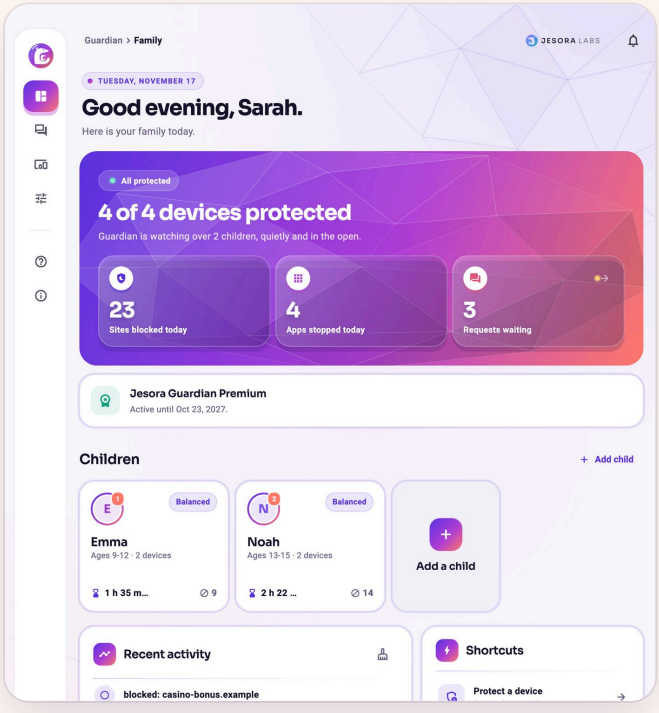

Family: children, devices and today at a glance

One tap opens every section

Requests from the children

The same app on iPad and on computers, with a sidebar.

What a parent can do

- Add children and choose an age band and level; every rule is pre-set and can be changed.
- Answer requests in a tap: each says what and for how long. Or give bonus time.
- Pair a device in a minute with a code or QR.
- Set a parent PIN and use offline unlock codes when a device has no internet.
- Get alerts by email and in the app.
- Clear history (blocked sites, answered requests, alerts, past screen time), export the family's data or delete the account at any time.

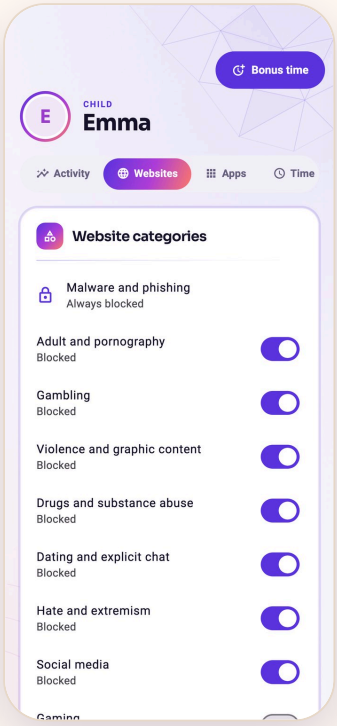

EACH CHILD'S RULES

Rules that fit their age

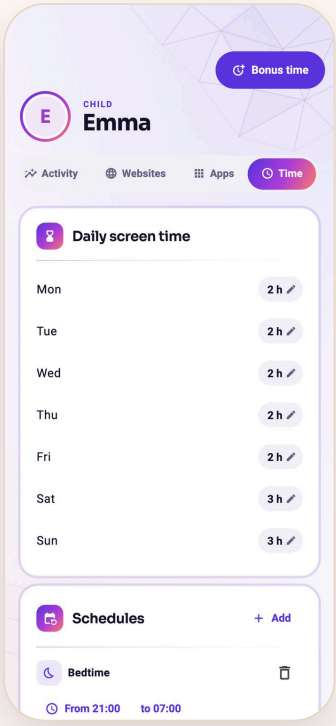

Each child has a page with their activity and three kinds of rules. Choosing an age band and a level fills them all in; the parent can change any of them.

Activity: screen time, apps and blocked sites

Websites: categories, SafeSearch and lists

Time: daily limits, bedtime, school time

The balanced starting points

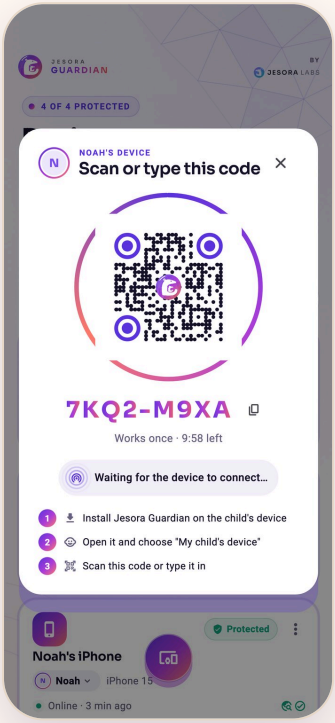

AGE	SCREEN TIME (SCHOOL DAY / WEEKEND)	BEDTIME	APPS	WEB, BEYOND THE HARMFUL CATEGORIES
3–5	1 h / 1 h 30	19:30–07:00	Games 1 h; social apps and browsers blocked	Unknown, social, gaming, video and shopping sites blocked; YouTube strict
6–8	1 h 30 / 2 h	20:00–07:00	Games 1 h; social apps blocked	Unknown, social and shopping sites blocked; YouTube strict
9–12	2 h / 3 h	21:00–07:00	Games 1 h; social apps blocked	Social sites blocked; YouTube Restricted Mode
13–15	3 h / 4 h	22:00–06:30	Games and social apps 1 h 30 each	YouTube Restricted Mode
16–17	4 h / 5 h	23:00–06:00	No app limits	YouTube unrestricted

Blocked at every age: adult, self-harm, gambling, violence, drugs, dating, hate, VPN and proxy tricks, ads, malware and phishing. SafeSearch on. School time (Mon–Fri, 8:00–15:00, learning and chat apps only) from age 6. **Strict** blocks more and gives 30 minutes less; **relaxed** gives an hour more and turns blocks on social, games and video into limits.

CHILDREN'S DEVICES

Protect a device in a minute

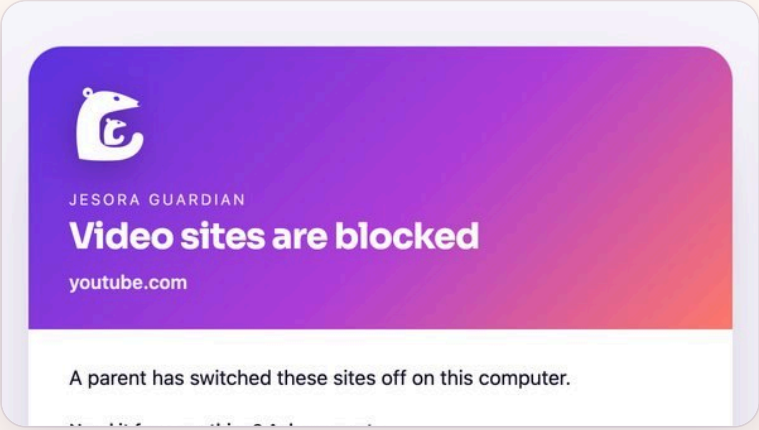

Install Guardian on the child's device, choose **My child's device**, and scan the code the parent app shows (or type it). The device then follows that child's rules and stays visible: a notification or tray icon shows Guardian is on.

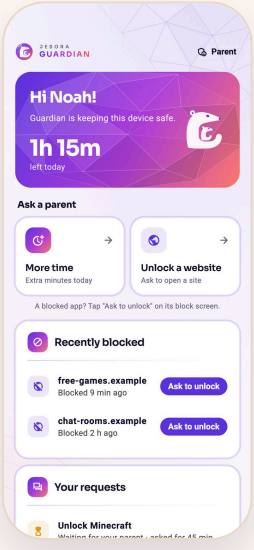

The code and QR in the parent app

DEVICE	HOW GUARDIAN PROTECTS IT
Windows 10 and 11	A protection service and a session helper: system-wide web filter (every browser and app), closing apps that aren't allowed, screen time and bedtime with a lock screen, browser settings (secure DNS off, SafeSearch). The child should use a standard account.
macOS 13+ SOON	A protection daemon: the same web filter, app closing, screen time and lock as on Windows. Standard account for the child.
Android 8+	A local VPN that carries only website lookups, usage access for app time, a block screen over apps that aren't allowed, and a screen lock at bedtime. Each permission is explained first.
iPhone and iPad (iOS 16+)	Apple's Screen Time controls, approved on the device with Face ID or the passcode. A parent chooses the apps to count, block and always allow behind the PIN. Websites (up to 25 on the parent's list, plus Apple's adult filter), daily limits and bedtime follow the rules; Apple's block screen shows the Guardian mark and Ask to unlock, which can open exactly that app for the time the parent allows.

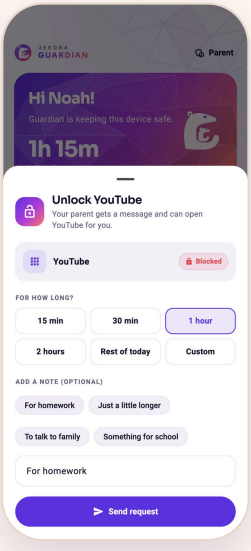

On the child's device, Parent: type the parent PIN or an unlock code from the parent app on the keypad to pause protection, resume it, choose apps (iPhone and iPad) or turn protection off. Each use is reported to the parent.

A blocked site in the browser, with Ask a parent (browser extension).

The child's own screen

Ask to unlock, for a chosen time

FAIR BY DESIGN

Visible, explained, never hidden

Always visible

Guardian shows it is on, on every protected device. There is no hidden mode.

Nothing private is read

Guardian never reads messages, keystrokes, photos or passwords, and never records the screen. On Android the VPN carries only website lookups.

Children can always ask

Every block screen says why and has Ask to unlock (Ask a parent in the browser). Malware stays blocked; self-harm blocks show helplines.

Turning it off needs a parent

A parent PIN or an offline unlock code. If protection is turned off another way, the parent is told.

What is kept, and for how long

DATA	WHY	KEPT
Parent account (name, email)	Signing in, emails about the account	Until the account is deleted
Children's first names, age bands, rules	Applying the rules	Until removed
Blocked and requested sites, app minutes	Activity for the parent	As in the privacy notice (retention runs every hour)
Allowed sites	Not recorded	—

Everything goes only to guardian.jesoralabs.com, for the family's own use: no ads, no tracking, no analytics SDK. Full notice: guardian.jesoralabs.com/privacy. The parent can export the family's data or delete the account at any time.

PLANS

One plan for the whole family

PLAN	WHAT WORKS	PRICE
Free trial	Everything, for 7 days from the first child profile. No card.	Free
Premium	Everything, for up to 5 children and 10 devices: web filtering, app and game limits, screen time, bedtime and school time, custom lists, requests, activity and alerts	**₹199 a year** in India **US$6.99 a year** in the US local prices elsewhere
Essential (after a trial or subscription ends)	Adult, self-harm, malware and phishing blocking and SafeSearch keep running on registered devices; the rest pauses, and parent and child both see it	Free

Where to buy

- On guardian.jesoralabs.com (Razorpay in India, PayPal elsewhere), from any computer.
- In the Android app (Google Play) or the iPhone and iPad app (App Store).
- Wherever it is bought, Premium belongs to the family, so it covers every child and device.

Renewal and cancelling

- The price doesn't rise when it renews.
- Cancel any time: on the website, or in Google Play or Apple ID subscriptions. Premium runs to the end of the paid year.
- Protection is never removed silently.

> Install: Windows and the Mac parent app from guardian.jesoralabs.com, Android from Google Play, and iPhone and iPad from the App Store. Protection for a child's Mac follows after testing.

THE MAKER

Jesora Labs

JESORA LABS

Jesora Labs makes small, honest software for families and everyday computers: Jesora Antivirus, Jesora Optima and Jesora Guardian. Each one says plainly what it does, keeps what it collects to a minimum, and costs the same every year.
